SenditCertified ePackage Trial Results Will Shock Medical Industry and Provide Solutions to Obama's Electronic Health Record Initiative

CHARLOTTE, NC--(Marketwire - January 14, 2009) - SenditCertified™(www.SenditCertified.com), a division of BioConfirm, LLC, has initiated a private-beta trial with Mid-Carolina Cardiology offering proof that the company's web-based, fully-certified communications platform and patent-pending ePackage™ will not only benefit the medical and healthcare industries but will also provide a key component to President-Elect Obama's electronic health record initiative.

More specifically, SenditCertified™'s ultra secure, simple-to-use communication system for sending, receiving and storing sensitive information worldwide via its fully-certified platform will ensure that medical professionals who use the system are in full compliance with all HIPAA and PHI regulations.

"The SenditCertified™ technology single-handedly provides the medical and healthcare industries with a simple approach to quickly and securely communicating with patients at a substantial savings," remarked Steve McAdams, MD and CEO of Mid-Carolina Cardiology. "The pitfalls of standard email communication put medical professionals at risk of violating HIPAA regulations, and the penalties are extreme: this system fully addresses these issues and provides multiple benefits."

During the course of the trial, Mid-Carolina Cardiology will benefit from the following SenditCertified™ features:

- Patent-pending ePackage™
- Full encryption during transmission
- Audio and written messages
- Attached files of virtually any size
- Private data vault storage
- Fingerprint identity verification

The various stages of the trial include: patient data and test results upload to the SenditCertified™ platform; ultra secure data transmission and delivery; and electronic medical record storage.

"This system allows us to keep the continuity of care intact, and does not require any additional employee training -- it is simple and easy to set up. Now our patients can receive their confidential test results, a personal voice message from their doctor or nurse, and other important information via SenditCertified™ while we remain in compliance with all HIPAA and PHI regulations," continued McAdams.

About SenditCertified™

SenditCertified™(www.SenditCertified.com) is a division of BioConfirm, LLC. The company was formed in 2006 by a group of top-industry IT professionals whose vast experience in researching and developing ground-breaking biometric technologies led to the creation of the patent-pending ePackage™. SenditCertified.com, currently in beta, is set to launch in early 2009.
